Storage options in the Cloud

Storage, but safe!

With two different cloud solutions, the library offers researchers at H-BRS the possibility to store data, texts and images. The data is stored locally on the library's servers. The cloud services also make it easy to share stored files with others. The library's online storage is based on the open source software Nextcloud.

Further information on the Cloud services at H-BRS:

Bib-Cloud: Employees at H-BRS have a storage space of 30 GB available. The login to the Bib-Cloud is done with the library ID.

ForschungsCloud: Researchers at H-BRS have an additional 50 GB available for the exchange of research data. Registration is required for use.

External Services:

Sciebo > A secure, non-commercial cloud storage by universities for universities.

Coscine > Storage platform for sharing and archiving research and metadata.

The RDM team answers your questions regarding the Cloud storage at
